There are no recommendations to people living in the area, the municipal water supplies are not affected. Contamination is mainly on-site with releases to surface water and to wetlands. The site is located in an industrial area with minimal traffic, access is limited. The people who live on-site - know of the on-site pits.

Gary-Anything to add?

OK. Are there any recommendations to people who live in the area? Drink bottled water or anything like that?

Jennah:

No RPM has been assigned to the Delta Shipyard Site. For now, your best technical contacts will be Brenda Cook (x7436) and/or Gary Moore (x6609). Brenda and Gary did a joint site assessment/removal assessment at the site. We do not know of current health impacts. However, if the Site is listed on the NPL, ATSDR (for CDC) will complete Health Assessment within one year of listing. In respect to removals, none have been done to date.

Hi Chris,

9522554

Is there an RPM for the Delta Shipyard site? I might need to get technical information for reporter questions. Do you know if there are any current health impacts at the site? Have any removals been done yet?

Thanks,
Jennah Durant
